

Outpatient Clinic - Health Care Benefits (Upon clicking the link the content below is displayed)

In addition to the Regional Office, VA operates an Outpatient Clinic (OPC) in Manila, Philippines. This is the only standalone ambulatory care facility located in a foreign country.

To be eligible for healthcare while in the Philippines, U.S military veterans must have conditions or disabilities incurred in or aggravated by military service rated by the VA at 0% or greater.

Health care services are provided at the OPC by Primary Care Physicians (PCPs) and contracted Specialist Consultants. Most specialties are available in house or by contract. The outpatient services are made up of general medicine, internal medicine with subspecialties in cardiology, rheumatology, pulmonary, nephrology, mental health, neurology, dermatology, ENT, audiology, orthopedics, gastroenterology and ophthalmology. Ancillary services added in are nursing, radiology, social work, pharmacy, laboratory, prosthetics and a number of other professional and support services.

OPC also provides general medical and/or specialist examinations sufficient to identify a condition and determine the extent to which a veteran is disabled. All findings are elemental to the adjudication of claims for VA benefits.

Inpatient and fee basis outpatient care is limited to treatment of service-connected conditions and is provided through fee-based arrangements with accredited medical facilities and private health care providers in their community.
